

Inaugural Publication of the University of the Arctic Press

On Top of It:

Overcoming the Challenges of ICT and Distance Education in the Arctic

The use of Information and Communication Technology (ICT) can effectively enhance learning where traditional models have failed. While these technologies offer advantages, they also pose challenges: for individuals, communities, and societies.

What form do these challenges take? What strategies can we use to overcome them?

On Top of It: Overcoming the Challenges of ICT and Distance Education in the Arctic is an assembly of fifteen articles from experts concerned with the circumpolar north that offers ideas and reflections on these questions.

This publication addresses government policy, international cooperation, indigenous perspectives, distance pedagogy, effective evaluation, infrastructure needs, institutional changes, and social relations as they relate to Arctic education and new technologies.

Together the contributors represent every Arctic nation, and a variety of viewpoints drawing on both experience and theoretical knowledge. *On Top of It* is an excellent resource for all residents of the Arctic — and elsewhere — who have a stake in the issue of ICT and distance education: students, academics, policy makers, and politicians.

Title: *On Top of It: Overcoming the Challenges of ICT and Distance Education in the Arctic*

Editors: Leo Pekkala, Wolfgang Greller, Alexander Krylov, Lars Kullerud, Sigurjón Mýrdal, Outi Snellman, and John Spence

A Joint Publication of the University of the Arctic Press and the University of Lapland Faculty of Education

ISBN 951-634-912-9
